

## Elements and Compounds (Chemicals in Action)

This volume is part of a series which introduces the core areas of chemical science, covering important concepts in an accessible style. Each book in the series contains a number of experiments and demonstrations, approached through the process of problem, hypotheses, experiment and conclusion. Definitions of important terms and explanations of key concepts are provided, as are formulae and word equations. Each text contains a periodic table with explanatory notes. All the books support the QCA schemes of work.
